

```
1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <string.h>
4
5  "kwd">int main() {
6      "kwd">char mainDirectory[] = "C:/Users/itssk/OneDrive/Desktop";
7      "kwd">char subDirectory[] = "os";
8      "kwd">char fileName[] = "example.txt";
9      "kwd">char filePath[200];
10     "kwd">char mainDirPath[200];
11
12     snprintf(mainDirPath, sizeof(mainDirPath), "%s/%s/", mainDirectory,
subDirectory);
13     snprintf(filePath, sizeof(filePath), "%s%s", mainDirPath, fileName);
14
15     FILE *file = fopen(filePath, "w");
16     "kwd">if (file == NULL) {
17         printf("Error creating file.\n");
18         "kwd">return 1;
19     }
20
21     fprintf(file, "This is an example file content.");
22     fclose(file);
23
24     printf("File created successfully: %s\n", filePath);
25     "kwd">return 0;
26 }
```

## Output

File created successfully: C:/Users/itssk/OneDrive/Desktop/os/example.txt

=== Code Execution Successful ===
